The Oxford Handbook of Music Therapy: Hospice and Palliative Care. Music Therapy: Bibliography for Music Therapy in Palliative Care 1963-1996; Case Study Designs in Music Therapy; Ethnographic Practice of Music Therapy

This comprehensive book describes well-defined models of music therapy for working with families in different clinical areas, ranging from families with special needs children or dying family members through to families in

The Oxford Handbook of Music Therapy

This volume presents the current state of knowledge on the practice of music therapy. This includes working with patients in various medical units, during diverse procedures, with various medical diseases and diagnosis, as well as emotional, social, expressive, and spiritual needs. Included are chapters on the following populations and/or spiritual needs: pediatric, pain management, end of life, hospice, palliative care, and support groups.

Hospice and Palliative Care Music Therapy

Anesthetist and pain specialist, Maria Paola Brugnoli, brings together her experience, knowledge and emotional intelligence in this integrative work on clinical hypnosis and pain management. In it, she presents a new system approach to the neurophysiological states of consciousness to improve the use of clinical hypnosis and mindfulness in pain therapy and palliative care. The book explores the fields of clinical hypnosis and mindfulness as applied to the therapy of suffering and suffering of various types of acute and chronic pain, and in dying patients. It is organized in order to show all scientific, neurophysiological theories currently in use regarding various aspects of pain and suffering. The author’s deep sensitivity is most notable in her attention to the person in pain. She gathers together the techniques for distracting them from the painful present and transporting them to another dimension. One can imagine her psychological hand-holding and support as she moves her patients from suffering to relief. Ampicilic scripts are provided to the reader for many inductions.

Bibliography for Music Therapy in Palliative Care 1963-1996

Case Study Designs in Music Therapy

Episodes of Relationship Completion Through Song in Palliative Care

Melody is thought to be an ‘essential core’ of music. In the context of music therapy, knowing how patients develop their own melodies in improvisation can explain how they find their own voice, determine their position in relation to the world, and play an important role in how they relate to their therapist. Gudrun Aldridge and David Aldridge explore the concept of melody within its historical context and investigate current theories of melody. They make recommendations for choosing an appropriate method of analyzing melodic improvisation, and utilize case studies to demonstrate these analyses in practice. They show how the interaction between patient and therapist is affected by the patient’s melodic statements, and how the process of improvisation offers patients a chance to transform their inner emotions into externalized expressions. Melody in Music Therapy is an important addition to music therapy literature, and will be of interest to music therapists, educators and students alike, as well as musicologists.

A Music Therapy Program Design for Neuro-Palliative Care

The Next Step Forward

Music Therapy Handbook

The use of music therapy to support patients and families receiving traditional (oncology-based) palliative care has been well established in research and practice (Bradt & Dileo, 2010). In this study, intervention research methods (Riggen, Coleman, & Day, 2009) were used to design a music therapy intervention manual for the emergent sub-specialty of neuro-palliative care. Two participants (one neuro-palliative care neuro-oncology, one music therapist) were interviewed regarding applications of music therapy for patients with end-stage brain tumors, strikes, and progressive neurological disorders. These findings, combined with the researcher’s own clinical experience, suggest the essential components of a music therapy program for neuro-palliative care, give detailed descriptions of music therapy interventions for neuro-palliative care, and outline patient and family needs and goals for music therapy in neuro-oncology settings.

Hospice and Palliative Care Music Therapy

As a palliative medicine physician, you struggle every day to make your patients as comfortable as possible in the face of physically and psychologically devastating circumstances. This new reference equips you with all of today’s best international approaches for meeting these complex and multifaceted challenges. In print and online, it brings you the world’s most comprehensive, state-of-art coverage of your field. You’ll find the answers to the most difficult questions you face every day you can provide a patient with the relief they need. Equips you to provide today’s most effective palliation for terminal malignant diseases, end-stage renal, cardiovascular, respiratory, and liver disorders, progressive neurological conditions, and HIV/AIDS. Covers your complete range of clinical challenges with in-depth discussions of patient evaluation and outcome assessment: ethical issues • communication • cultural and psychosocial issues • research in palliative medicine • principles of drug use • symptom control • nutrition • disease-modifying palliation • rehabilitation • and pain management. Written and edited by global experts and global best practices with advice from a matchless international author team. Provides in-depth guidance on the specific needs of pediatric and geriatric patients. Assists you in skillfully navigating professional issues in palliative medicine such as education and training • administration • and the role of allied health professionals. Includes just enough information that you can understand the “whys” of effective decision making, as well as the “how tos.” Offers a user-friendly, full-color layout for ease of reference, including color-coded topic areas, mini chapter outlines, decision trees, and treatment algorithms. Comes with access to the complete contents of the book online, for convenient, rapid consultation from any computer.

Music Therapy in Palliative Care

This study utilized a combination of intrinsic and instrumental case studies to describe the experience of four dying persons and their significant relations, as they engaged in music therapy sessions designed with the goal of facilitating relationship completion. The four primary participants were inpatients of the Baycrest palliative care program who were diagnosed with a terminal illness and a life expectancy of less than six months. Two spouses who were involved in music therapy sessions were co-participants. I developed four case studies to represent each of the rich and detailed stories. Through the use of narrative research methods I was able to describe, interpret, and understand the complexity held within the multiple data sources that informed each case study. Data sources included: music created, utilized, recorded, and/or discussed in music therapy sessions; discussions during the therapy sessions; the participant’s statements; the researcher’s notes; formal notes placed in the participant’s medical charts; the formal written assessment; transcriptions of audio-taped music therapy sessions; interviews; interview transcriptions; artistic pieces crafted by myself that emerged from the experiences of the participants as reflected in their interviews, and weekly participation in sessions which were verified by the participants; and other artistic materials. The richness that emerged from the individual case studies informed a cross-case analysis where global themes were identified from a thematic analysis of participants’ interviews during the therapy sessions; the participant’s statements; and the researcher’s notes. The rich knowledge that emerged from the individual case studies informed a cross-case analysis where global themes were identified from a thematic analysis of participants’ discussions during the therapy sessions. The rich knowledge that emerged from the participant’s statements informed a cross-case analysis where global themes were identified from a thematic analysis of participants’ discussions during the therapy sessions. The rich knowledge that emerged from the participant’s statements informed a cross-case analysis where global themes were identified from a thematic analysis of participants’ discussions during the therapy sessions.

Music Therapy in Palliative Care Handbook

This Oxford Textbook of Palliative Medicine, now in its fifth edition, has again been thoroughly updated to offer a truly global perspective in this field of extraordinary talent and thoughtfulness. Updated to include new sections devoted to assessment tools, care of patients with cancer, and the management of issues in the very young and the very old, this leading textbook covers all the new and emerging topics since its original publication in 1993. In addition, the multi-disciplinary nature of palliative care is emphasized throughout the book, covering areas from ethical and communication issues, the treatment of symptoms and the management of pain.

Oxford Handbook of Palliative Care

The Oxford Handbook of Palliative Care (2014) provides a comprehensive overview of music therapy in palliative care, including the role of music therapists, music therapy intervention strategies, and the impact of music therapy on patient and family needs and goals. The book covers a wide range of topics, including pain management, communication, and spiritual care. It also includes case studies and clinical examples to illustrate the application of music therapy in different clinical settings.

Where To Download Music Therapy In Palliative Care New Voices
psychiatric or paediatric hospital settings. International contributors explain the theoretical background and practice of their specific approach, including an overview of research and illustrative case examples. Particular emphasis is placed on connecting theory and clinical practice and on discussing the challenges and relevance of each model. This practical and theoretically anchored book will prove valuable for music therapists, students and researchers in the fast developing field of music therapy with families.

Creative Interventions with Traumatized Children

Research and clinical work are often perceived as opposites in the field of music therapy. This book shows, for the first time, how these two areas of work can creatively complement one another, proving beneficial to both disciplines. Each chapter is written by a leading researcher and practitioner in the field, and the book covers a wide spectrum of approaches within different settings. Beginning with methodological and musical approaches, the book then moves on to specific topics such as the use of case studies in an interactive play setting and in music therapy with the elderly. Later chapters explore theoretical aspects, looking at a worked example of music and progressive change during therapy, and how case study designs can be used in practice. A must for all professionals working and studying within the music therapy area, this is also an informative and useful book for health researchers.

Music Therapy in Palliative Care

Music therapy is growing internationally to be one of the leading evidence-based psychosocial allied health professions, meeting needs right across the lifespan. Music therapy is a relational therapy in which the therapist collaborates with clients how music can be used to enhance positive relationship skills, attending to the client’s immediate and longer term needs through assessment, treatment planning, implementation, and evaluation of a music therapy program. Music therapy is based on the capacity of music provided by a trained and qualified practitioner to support, integrate, and heal trauma, pain, psychological distress, and to develop and extend the existing capacities of the client. In the Oxford Handbook of Music Therapy, international leaders in the field from 15 countries have contributed their expertise to showcase contemporary music therapy. They share knowledgeable perspectives from multiple models of music therapy that have developed throughout the world, including Nordoff-Robbins Music Therapy, The Field of Play, Community Music Therapy, and Resource Oriented Music Therapy. There is extensive information provided to how music therapists practice and with whom, as well as the techniques used in music therapy individually and in groups, the research basis for the therapies, and the ongoing evaluation of music therapy research. The book is clearly laid out in five sections: contexts and populations, models and approaches, methods and techniques, research methods, and training and professional issues. Course materials can be structured around the book, or the book can be used as a starting point for students’ learning about a model or population. Music therapy students will enjoy the clear descriptions of practice, the clinical vignettes, and the helpful pointers and tips for developing placement work. Unupheld in depth and breadth, this landmark publication is an essential resource for those starting out in Music Therapy, as well as for experienced practitioners.

CLINICAL HYPNOSIS IN PAIN THERAPY AND PALLIATIVE CARE

Emphasising the multi-disciplinary nature of palliative care, the fourth edition of this text also looks at the individual professional roles that contribute to the best-quality palliative care.

Palliative Medicine E-Book

The Oxford Handbook of Palliative Care covers all aspects of palliative care in a concise and succinct format suited to busy professionals who need to access key information in their daily care of patients. This new edition is revised throughout, with an additional emphasis on the nursing aspects of Palliative Care. The authors have included new sections on international palliative care, self care and liaison palliative care in acute hospitals. There is also extended material on the use of antibiotics, palliative care research and quality of life issues. The second edition of the Oxford Handbook of Palliative Care continues to be an invaluable resource for all health professionals working with adults, children and families with palliative care needs.

Music Therapy in Palliative Care

This book brings together music therapists who have worked in the challenging and rewarding world of children’s palliative care. Examining techniques from working with just one of the many challenges and techniques in music therapy, including recording and electronic downloading. It highlights the benefits of music therapy can bring when working alongside children and young people. Drawing on the knowledge of expert music therapists, the book shows how and what people can apply to their work, including on professional development as part of a multi-disciplinary team, service evaluation, and managing publicly in the hospice setting. This book is written by different client groups, such as teenagers, and discusses therapy with family members, including siblings. Music therapists and healthcare practitioners will be provided with the tools to reflect on their own professional challenges and deepen their understanding of the important role music therapy can play.

Moments Musicaux

A description of the use of music therapy practice in hospice and palliative care with information about marketing music therapy services.

Music Therapy in Palliative/hospice Care

Get a quick, expert overview of the clinical and evidence-based use of music interventions in health care. This practical resource compiled by Dr. Olivia Swedberg Yinger provides a concise, useful overview of the field of music therapy, including a description of research and practice that music therapists can apply to their own work, including on professional development as part of a multi-disciplinary team, service evaluation, and managing publicly in the hospice setting. This book is written by different client groups, such as teenagers, and discusses therapy with family members, including siblings. Music therapists and healthcare practitioners will be provided with the tools to reflect on their own professional challenges and deepen their understanding of the important role music therapy can play.

Music Therapy with Families

The importance of palliative care for children facing life threatening illness and their families is now widely acknowledged as an essential part of care, which should be available to all children and families, throughout the child’s course of treatment. The new edition of Children’s Palliative Care provides the most up to date information, current knowledge, evidence, and developments of clinical practice in the field. The book is structured into four sections. ‘Foundations of Care’ describes core issues, the foundations on which paediatric palliative care is based. ‘Child and Family Care’ looks at different aspects of psychological distress and symptom control, including pain, illness and family. ‘Symptom Care’ focuses on the uses of medications, specific symptom, and their management. Finally, ‘Delivery of Care’ examines practical approaches to care in different environments and the needs of clinicians. Two new editors take the narrative from Canada and South Africa, reflecting our aims to contribute towards the development of palliative care for children across the world, and to be a resource for both experienced clinicians and those new to the field. Comprehensive in scope, exhaustive in detail, and definitive in authority, this third edition has been thoroughly updated to cover new practices, current epidemiological data, and the evolving evidence of the important role music therapy plays in delivering palliative care to children. This includes two new chapters, focusing in detail at: ‘Decision Making’ and ‘Perinatal Care’, and a new section highlighting the emerging importance of ‘Palliative Care for Children in Humanitarian Crisis’. This book is an essential resource for anyone interested in finding out about music therapy for children worldwide.

Hospice and Palliative Care

Rich with case material and artwork samples, this volume demonstrates a range of creative approaches for facilitating children's emotional reparatory and recovery from trauma. Contributors include experienced practitioners in the field, including mental health professionals, nurses, professionals in the arts, education, and religious/spiritual care. Specifics of therapeutic approaches described include parental loss, child abuse, accidents, family violence, bullying, and mass trauma. Broader approaches to promoting resilience and preventing post-traumatic stress in children at risk are also presented.

Oxford Textbook of Palliative Care for Children

Use of the arts in palliative care settings is a powerful and effective way of addressing the practical, psychological, social and spiritual issues faced by service users in end-of-life care. The Creative Arts in Palliative Care uncovers the possibilities for using the creative arts and provides guidance on how to implement arts projects successfully. Part 1 focuses on designing objectives for the creative arts in palliative care – such as self-fullfilment, social participation, diversion from pain and other common symptoms - and managing creative arts services. Part 2 demonstrates the theory and principles in practice, with detailed case studies: each chapter draws on a real-life project, the approaches it employed and the outcomes achieved. This book will be essential reading for healthcare professionals, arts practitioners and all those involved in providing palliative care services.

Melody in Music Therapy

Music Therapy in Children and Young People’s Palliative Care

Oxford Handbook of Palliative Care

Can you summarize the content of the Oxford Handbook of Palliative Care? The Oxford Handbook of Palliative Care covers all aspects of palliative care in a concise and succinct format suited to busy professionals who need to access key information in their daily care of patients. This new edition is revised throughout, with an additional emphasis on the nursing aspects of Palliative Care. The authors have included new sections on international palliative care, self care and liaison palliative care in acute hospitals. There is also extended material on the use of antibiotics, palliative care research and quality of life issues. The second edition of the Oxford Handbook of Palliative Care, continues to be an invaluable resource for all health professionals working with adults, children and families with palliative care needs.
Receptive Methods in Music Therapy

Within the last decade music therapists have developed their work with people who have life-threatening illnesses and with those who are dying. This book presents some of that work from music therapists working in different approaches, in different countries, showing how valuable the inclusion of music therapy in palliative care has already proved to be. It is important for the dying, or those with terminal illness, that approaches are used which integrate the physical, psychological, social and spiritual dimensions of their being. The contributors to this book emphasize the importance of working not only with the patient but with the ward situation, friends and family members. By offering patients the chance to be creative they become something other than patients—they become expressive beings, and there is an intimacy in music therapy that is important for those who are suffering. Many of the contributors write in their own personal voice, providing a particular insight which will be valuable not only to other music therapists seeking to enrich their own ways of working, but to all those involved in caring for the sick and the dying. Contributors describe their work with both children and adults living with HIV/AIDS, cancer and other chronic degenerative diseases.

Hospice & Palliative Care Music Therapy; A Guide to Program Development and Clinical Care

How Did Music Therapy Contribute to a Patients' Quality of Life in a Hospice and Palliative Care Setting?

A much-needed contemporary guide for music therapy with young people at the end of life, focusing on how children can benefit from music therapy intervention. It also covers the benefits of therapy with family members and in care settings as a whole.

Music Therapy in Children’s Hospices

The use of music therapy in children’s hospices has burgeoned since its introduction by Jessie’s Fund in the mid-90s. This moving and extremely helpful text brings together the experiences of eleven music therapists working with children who are in the final stages of life-limiting illness. The contributors adapt music therapy to hospice environments and explore key concerns for all practitioners, including how to empower ill children and their families, how to help bereaved siblings, and how the therapists themselves find support. The book celebrates the communities created through an inclusive music therapy practice with children, their families and hospice staff. This text is essential reading for all music therapists working in palliative care and for health care professionals considering introducing music as a therapy.

The Creative Arts in Palliative Care

This practical book describes the specific use of receptive (listening) methods and techniques in music therapy clinical practice and research, including relaxation with music for children and adults, the use of visualisation and imagery, music and collage, song-lyric discussion, vibroacoustic applications, music and movement techniques, and other forms of aesthetic listening to music. The authors explain these receptive methods of intervention using a format that enables practitioners to apply them in practice and make informed choices about music suitable for each of the different techniques. Protocols are described step-by-step, with reference to the necessary environment, conditions, skills and appropriate musical material. Receptive Methods in Music Therapy will prove indispensable to music therapy students, practitioners, educators and researchers.
